Course Description:

This exercise-based course emphasizes recovery and mitigation activities and planning. It places public officials and other key community leaders in a simulation that begins after a disaster has affected a community. The course methodologies of classroom instruction, planning sessions, and exercises allow for structured decision making in a learning environment that is nonetheless realistic. A key outcome of this IEMC is to provide participants with the ability to carry out their respective functions related to disaster recovery, in both the short-term and the long-term. The exercise scenario focuses on recovery from severe weather and related flooding. Mitigation activities to prevent or reduce the future impact of a similar disaster also are identified during the mitigation exercise.
