

## **Saint Louis University – Bachelor of Science in Emergency Management**

Disasters, natural, man-made and technological, require the service of educated, competent and professional emergency managers and homeland security experts. Whether it is working in the area of business continuity, local, state or federal government agencies, the private sector or community stakeholders, the demand continues to increase as the public demands the skills of professionals to assist communities in mitigating, preventing, protecting, responding and recovering from crisis situations.

The Bachelor of Science in Emergency Management focuses on improving community resilience to minimize both the short- and long-term effects of disaster situations. This program encompasses all of the sectors recognized by the Department of Homeland Security and the Federal Emergency Management Agency as a comprehensive, multi-discipline program including communications, firefighting, public health and medical, search and rescue, hazardous materials, law enforcement, military, social services, and business continuity, among others.

In addition to the required core courses of a four-year university the Emergency Management Undergraduate Major is a 45-credit hour program.
